Education

Malla Reddy College of Engineering and Technology, Hyderabad	2023 – Present
B.Tech in Computer Science and Engineering (Artificial Intelligence & Machine Learning)	CGPA: 9.15

Technical Skills

-
- **Programming:** Python, Java, C
 - **Backend:** FastAPI, Flask, Spring Boot, RESTful APIs, Node.js
 - **Frontend:** HTML, CSS, JavaScript, React.js
 - **Databases:** SQL, PostgreSQL, MongoDB, SQLite, SQLAlchemy
 - **AI & ML:** Machine Learning, Deep Learning, NLP, LLMs, Generative AI
 - **Core CS:** Data Structures & Algorithms, Object-Oriented Programming
 - **Tools:** Git, GitHub, Linux, VS Code

Experience

Backend Developer Intern – Infosys Springboard Internship 6.0	Nov 2025 – Jan 2026
--	----------------------------

- Engineered RESTful API services for the BragBoard (StarWall) employee recognition platform using Python and FastAPI.
- Secured user management with JWT-based authentication and connected SQLite persistence through SQLAlchemy ORM.
- Integrated React frontend components with FastAPI services and validated API workflows through endpoint testing and debugging.

Machine Learning Intern – Cognifyz Technologies	Jul 2025 – Aug 2025
--	----------------------------

- Built a cuisine classification pipeline using Random Forest with data preprocessing and feature engineering on restaurant datasets.
- Formulated a restaurant rating prediction solution using Linear Regression and packaged model inference in an interactive Streamlit application.
- Used Scikit-learn, Pandas, and NumPy across preprocessing, model training, evaluation, and performance analysis workflows.

Projects

Smart Blood Donor Filtering and Matching System	GitHub
--	------------------------

- Architected an ML-based donor screening system to predict eligibility and identify compatible blood donors for emergency requests.
- Trained a Random Forest classifier on **50,000+ donor records** using demographic and donation-related features.
- Combined blood-group compatibility rules with ML-based eligibility predictions to filter suitable donors.
- Implemented a Flask-based REST API for donor eligibility filtering and blood compatibility matching.

Smart Admission Prediction System	GitHub
--	------------------------

- Engineered an AI-based web application to estimate graduate admission probability from academic and profile attributes.
- Combined **3 machine learning approaches**—Neural Network, Linear Regression, and Random Forest—for admission prediction.
- Processed GRE, TOEFL, CGPA, SOP, LOR, research, and work experience features for prediction.
- Implemented a Flask web application to present admission predictions and support university recommendations.

Certifications

-
- AWS Academy Graduate – Generative AI Foundations
 - Web Development Training – Internshala Trainings
